Counting Inversions

Music site tries to match your song preferences with others.

- You rank n songs.
- Music site consults database to find people with **similar** tastes.

Similarity metric: number of inversions between two rankings.

- My rank: $1, 2, \dots, n$.
- Your rank: a_1, a_2, \dots, a_n .
- Songs i and j **inverted** if $i < j$, but $a_i > a_j$.

Counting Inversions: Combine

Combine: count blue-green inversions

- Assume each half is **sorted**.
- Count inversions where a_i and a_j are in different halves.
- **Merge** two sorted halves into sorted whole.

Pre-condition. [Merge-and-Count] A and B are sorted.

Post-condition. [Sort-and-Count] L is sorted.

```
