Section: BCS-6B

Assignment 3

Question 1:

1. • Gene: Each gene is represented by a city
e.g (A, B, C, D, E, F)
- Chromosome: A sequence of Genes representing the order of cities visited.

Initial population

[A, C, B, D, E, F]

[A, B, D, C, F, E]

[A, C, F, D, C, E]

2. ~~if~~ Fitness = if valid sequence():
return $\frac{1}{\text{total Distance}}$
else:

return 0

* A valid sequence is ~~which is~~ feasible and visits all cities once.

3. ① [A, C, B, D, E, F] = $4 + 3 + 5 + 1 + 4 = 17 \Rightarrow \frac{1}{17} = 0.0588$
- ② [A, B, D, C, F, E] = $2 + 5 + 3 + 11 + 4 = 25 \Rightarrow \frac{1}{25} = 0.04$
- [A, C, F, D, C, E] = $3 + 11 + 6 + 3 + 6 = 29 \Rightarrow \frac{1}{29} = 0.034$

①, ② selected

$$4. \begin{array}{|c|c|c|c|c|c|} \hline A & C & B & D & E & F \\ \hline A & B & D & C & F & E \\ \hline \end{array} = \begin{array}{|c|c|c|c|c|c|} \hline A & C & B & C & F & E \\ \hline A & B & D & D & E & F \\ \hline \end{array}$$

This is not the best way to cross over since it results in invalid sequences and have zero fitness. The sequence have cities repeated and miss at least one of the cities.

$$5. \begin{array}{|c|c|c|c|c|c|} \hline A & C & B & C & F & E \\ \hline \end{array} \xrightarrow{\substack{D \\ \uparrow}} \begin{array}{|c|c|c|c|c|c|} \hline A & D & B & C & F & E \\ \hline \end{array}$$

$$\begin{array}{|c|c|c|c|c|c|} \hline A & B & D & D & E & F \\ \hline \end{array} \xrightarrow{\substack{\uparrow \\ F}} \begin{array}{|c|c|c|c|c|c|} \hline A & B & D & D & F & E & F \\ \hline \end{array}$$

This isn't the best way to perform mutation. It can cause both repeated cities, missing cities as well as invalid sequences.

Question 2

$$f(x) = x^3 - 60x^2 + 900x + 100$$

Chromosome	Binary String	x	Fitness
P ₁	001111	15	3475
P ₂	000100	4	2804

b)

$$\begin{array}{r} 001111 \\ 000100 \end{array}$$

$$001\boxed{1}00 \rightarrow 001000$$

$$000\boxed{1}1 \rightarrow 000011$$

Chromosome	Binary String	x	Fitness
01	001000	8	3972
02	000011	3	2287

c)

$$P_1 + P_2 = 3975 + 2804 = 6549$$

$$D_1 + D_2 = 3972 + 2287 = 6259$$

No the overall fitness has reduced.

d)

$$001000$$

Question 3

\mathbf{x}	\mathbf{y}	\mathbf{z}	\mathbf{d}
P_1	0	0	0
P_2	1	0	0
P_3	0	0	1
P_4	0	1	0
P_5	1	0	1
P_6	1	1	0
P_7	0	1	1
P_8	1	1	1

$$\vec{w} = [-2 \ 2 \ 3 \ 2]$$

$$\alpha = 1$$

iteration 1 $[-2 \ 2 \ 3 \ 2]$

$$P_1(0,0,0) \quad d=0 \quad \text{no change}$$

$$y=0$$

$$P_2(1,0,0) \quad d=0 \quad \text{no change } [-2 \ 2 \ 3 \ 2] + [-1 \ -1 \ 0 \ 0] = [-3 \ 1 \ 3 \ 2]$$

$$y=1$$

$$P_3(0,0,1) \quad d=0 \quad \text{no change}$$

$$y=0$$

$$P_4(0,1,0) \quad d=1 \quad \text{no change}$$

$$y=1$$

$$P_5(1,0,1) \quad d=1 \quad \text{no change}$$

$$y=1$$

$$P_6(1,1,0) \quad d=1 \quad \text{no change}$$

$$y=1$$

$$P_7(0,1,1) \quad d=1 \quad \text{no change}$$

$$y=1$$

$$P_8(111) \quad d=1 \quad \text{no change} \\ y=1$$

iteration 2 $[-3 \ 1 \ 3 \ 2]$

$P_1(0,0,0)$	$d=0$	$y=0$	no change
$P_2(1,0,0)$	$d=0$	$y=0$	no change
$P_3(0,0,1)$	$d=0$	$y=0$	no change
$P_4(0,1,0)$	$d=1$	$y=1$	no change
$P_5(1,0,1)$	$d=1$	$y=1$	no change
$P_6(11 \ 0)$	$d=1$	$y=1$	no change
$P_7(0 \ 1 \ 1)$	$d=1$	$y=1$	no change
$P_8(1 \ 1 \ 1)$	$d=1$	$y=1$	no change

No change in weights
